Why Must We Wait For

FROST??

- 1) Frost is basically frozen dew that has crystallized on the grass, making it hard and brittle. A grass blade is actually 90 percent water, therefore it also freezes.
- 2) Walking on frost-covered greens causes the plant to break and cell walls to rupture, thereby losing its ability to function normally.
- 3) When damaged, the putting surface weakens and becomes more susceptible to disease and weeds.
- 4) One foursome can leave several hundred foot-prints on each green, causing extensive damage.
- 5) A short delay while the frost melts can preserve the quality of the greens and prevent needless repairs.

A very special Thank you to each and every member who participated in our Club Championship. It was a very successful event as we had about 60 players – a far better turn out than years before. We also had a very nice crowd for the prime rib dinner. Nick and his staff prepared some excellent hors d'oeuvres and the main course received many compliments. Keep this event in mind for next year as we hope to make it even bigger and better.
